

AMAN MALIK

Full-Stack Engineer (AI · Web3)

ahmadamaan363@gmail.com | +91 8791102179 | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

SUMMARY

Full-stack engineer specializing in production backend systems — payment infra, encryption/auth, and real-time pipelines — across Web2, Web3, and AI products. Shipped 4 live platforms solo, including a Solana payment indexer with sub-3s on-chain detection and zero polling overhead. Comfortable owning architecture end-to-end, from DB schema to deployment.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Rust, Solidity

Frontend: React, Redux Toolkit, Tailwind CSS

Backend: Node.js, Express.js, WebSockets, Prisma, REST API design

Databases: PostgreSQL, MongoDB, MySQL, Redis

Infra / Tools: Cloudflare Zero Trust, Docker, Git, Postman, Cloudinary

Web3: Solana, Ethereum, Smart Contracts, Web3.js, Ethers.js

EXPERIENCE

Frontend Developer | *Weblyrix Digital Solutions*

Apr 2026 – Present

- Shipped production UI features for client SaaS products, focusing on real-time interaction states and rendering performance.
- Integrated LLM-powered chat/AI endpoints into client-facing products, cutting manual content workflows.

Co-Lead, Engineering | *NSDC-JH*

Jan 2026 – Apr 2026

- Architected a MERN event platform handling concurrent multi-event operations for **1 events / 130 attendees**.
- Designed a QR-based attendance system with time-bound tokens, eliminating proxy check-ins and cutting attendance fraud to near-zero.
- Built a real-time verification + automated reward-distribution pipeline, removing manual ops overhead for the organizing team.
- Engineered an internal coin-economy system to drive participation.

SDE Intern | *Jamia Hamdard*

Jun 2024 – Aug 2024

- Built modular full-stack features with optimized REST APIs, reducing average response latency and improving maintainability of shared backend patterns.
- Improved frontend performance via dynamic React interfaces.

PROJECTS

SolStore - *Permissionless cloud storage on Solana* (solstore.pro)

- Built a real-time Solana payment indexer (webhook-based, Helius) processing on-chain SOL transfers with memo-based identification, dust filtering, and UUID validation - **detects payments in <10s with zero polling overhead**.
- Engineered a full S3-compatible file browser backed by per-user R2 buckets using user-owned decrypted credentials - no shared-custody risk.
- Implemented AES-256-GCM versioned encryption for per-user R2 credentials with key rotation, JWT invalidation via tokenVersion, and per-endpoint rate limiting across all auth flows.

NoorI - *Network-layer content filtering for families* (noori.solstore.pro)

- Architected a Cloudflare Zero Trust DNS filtering engine with per-user rule isolation, org-wide precedence bands, and unique rule namespacing — blocks content at the network layer with zero on-device footprint.
- Built a multi-tenant family accounts system (invite-based + managed child accounts) with parent-controlled rule templates, per-child dashboards, and plan-gated device limits.
- Integrated subscription billing with server-side plan derivation to prevent client-side tampering.

Adora AI - *AI SaaS for UGC-style ad generation* (adora-ai.vercel.app)

- Built an end-to-end AI SaaS platform generating UGC-style ad images/video via a multimodal pipeline on Google Gemini APIs.
- Designed a credit-based billing system with secure auth, cutting ad-creation time from hours to minutes per asset.
- Built scalable backend on Prisma + PostgreSQL + Cloudinary for asset storage and delivery.

HypeChain - *Token launchpad on Ethereum* (hype-chain-gamma.vercel.app)

- Built a token launchpad supporting minting and full lifecycle management via Solidity smart contracts.
- Integrated Web3.js and Ethers.js for contract interaction and wallet-based auth flows.

EDUCATION

B.Tech, Computer Science — Jamia Hamdard University

GPA: 8.4 | 2024–2027

Diploma, Computer Engineering — AMU

GPA: 8.3
